ABOUT ME

I am a passionate and dedicated Web Developer with a solid background in full-stack development, specializing in frontend engineering using cutting-edge JavaScript frameworks such as React.js and Vue.js. With extensive experience in building, maintaining, and optimizing web applications, I thrive in collaborative team environments to deliver impactful and high-quality digital solutions. Always eager to stay ahead of industry trends, I am committed to continuous learning and am excited to contribute my skills to innovative and challenging projects.

SKILLS

- **Frontend** : React Js, Next Js, Vue Js, Redux, JavaScript, TypeScript, JQuery, HTML, CSS, Tailwind and SASS.
- **Backend** : PHP and NodeJs.
- **Tools & design** : SonarQube and Figma.
- **Version Control** : GIT
- **Database** : MySql and PostgreSQL.

EXPERIENCE

FRONTEND ENGINEER

Akar Inti Teknologi

July 2022 - Present

Bank Central Asia Project :

I have experience working with BCA, one of the largest independent banks, to develop a frontend system for managing purchases, payments, and building management, ensuring a seamless and efficient user experience.

My responsibilities :

- Converted Figma UI designs into responsive and user-friendly web components to ensure a seamless user experience.
- Managed state and data structures effectively, ensuring smooth and accurate data rendering throughout the application.
- Integrated APIs and developed frontend microservices to enhance application functionality and scalability.
- Conducted code analysis and maintenance using SonarQube, ensuring code quality and adherence to best practices.

KFC Project :

i develop and revamp their CMS and web ordering system, enhancing functionality, improving user experience, and ensuring seamless integration with backend services.

My responsibilities :

- Transformed Figma designs into interactive and responsive web components to enhance usability.
- Designed and managed reusable components and implemented effective state management.
- Consumed and integrated API data, improving functionality and user experience.
- Conducted unit testing using Jest to ensure robust and reliable code.
- Leveraged SonarQube for maintaining code quality and performing detailed code analysis.

Padma Hotel Project :

I developed and revamped the CMS and web ordering system, improving functionality, user experience, and backend integration.

My responsibilities :

- Built booking-related modules such as rate plan management, email voucher templates, promotional banners, and more.
- Transformed Figma designs into responsive, reusable components for better usability.
- Designed and managed reusable components and implemented effective state management.
- Integrated and consumed REST APIs to support booking operations and enhance customer experience.
- Conducted unit testing with Jest to ensure robustness and reliability.
- Maintained high code quality and performed detailed analysis using SonarQube.

FRONTEND ENGINEER

Neurabot

April 2020 - July 2022

SAAS Project:

I developed a digital laboratory web application powered by AI, designed to store, analyze, research, and study medical images, streamlining medical data management and research processes.

My responsibilities :

- Created advanced frontend annotation tools using Vue.js for precise medical image analysis.
- Designed and implemented real-time chat and collaboration features with Pusher to enhance teamwork.
- Developed an efficient uploader system for handling large files seamlessly.
- Transformed Figma designs into an interactive and user-friendly landing page to improve user engagement.

FULL STACK ENGINEER

Nokia

July 2018 - March 2020

Management Asset Project (PHP):

I developed an asset management application, streamlining asset tracking, organization, and reporting to improve operational efficiency.

My responsibilities :

- Developed a web application for internal employee data collection to streamline information management.
- Designed and implemented a newsletter system for automated email distribution.
- Created a point system for seamless data integration, reporting, and efficient user management.
- Built a regional data input survey system with features for daily monitoring and reporting to enhance data accuracy and oversight.

FULL STACK ENGINEER

Global Inovasi Utama

October 2017 - July 2018

Dashboard Monitor (PHP):

Developed a web-based advertising management system for ATM media advertisements, utilizing PHP for backend development.

My responsibilities :

- Developed a web-based management system for ATM media advertisements using PHP.

EDUCATION

2013 - 2016

GADJAH MADA UNIVERSITY

Bachelor's Degree in Computer and System Information

LANGUAGES

- **Indonesian:** Native
- **English:** Professional
